

Ethernet Surge Protector

SPG-8P

ID: 3438

Ethernet Surge Protector 8P PoE Gigabit SPG-8P is a device that effectively protects Ethernet network against surges arising as a result of inducing charges of high voltage.

Ethernet Surge Protector 8P PoE Gigabit SPG-8P is a device that effectively protects Ethernet network against surges arising as a result of inducing charges of high voltage.

Charges generated during atmospheric discharges damage the Ethernet ports on network devices. They can also cause damage to the entire system, often rather expensive. The guarantee imposed by the manufacturer does not cover this type of damage and must be repaired at the cost of the owner.

Ethernet Surge Protector collects the loads induced in the network and safely transfers it to the ground, which effectively prevents damage resulting to the surges.

Our Ethernet Surge Protectors prevent quite a lot of devastating damages to valuable computer systems and other networking equipment every year. Lighting surge protector will ensure peace of mind, as you know that your devices are safe, even in the midst of thunder-storms.

Ilość portów LAN	8 x 10/1000 Mbps
Ilość portów PoE	8 x 10/1000 Mbps
Napięcie zasilające	12-54 V DC
Maksymalne napięcie PoE	54 V
Zasilanie PoE po skrętce	(4,5+),(7,8-)
Maksymalny prąd pobierany z jednego portu	1 A
Prąd przy którym następuje zamknięcie portu	1,4 A
Chronione pary	1-2,3-6,4-5,7-8
Typ gniazda	RJ-45 shielded
Waga	0.185 kg
Wymiary	130 mm x 115 mm x 30 mm
Gwarancja	12 months
EAN-Code	5901225203021
