

cyberteam[®] **FiberTechnic**[®] **LANTECHNIC**[®]

SUPPLIER OF COMPREHENSIVE ICT SOLUTIONS

Cyberteam® is located in Zamość, in Mielec Special Economic Subzone. This is where the design, manufacturing and prototype testing takes place. In headquarters in Zamość, on Strefowa 8 street are also our Sales Department and Warehouse – where all orders are proceeded.

Cyberteam® is part of Nowak Technologie. It has started by manufacturing microwave antennas co-designed with ZUT Department of Computer Science. Growing demand for wireless internet access gave the opportunity to introduce new, unique products. That was the reason to create patented, anti-noise shields for MikroTik and Ubiquiti devices.

Constant strive for improvements lead to setting up department that focuses on designing and manufacturing electronics. Cyberteam introduced to the market wide range of surge protectors, PoE adapters and backup power supplies.

FiberTechnic® was established in 2016. New brand responded to the increasing needs for high quality fiber optic solution. It covered full range of passive and active components used in optical networks i.e. fiber optic cables made in Europe, ODFs, accessories, all-aluminium, rust-free outdoor cabinets in variety of sizes and IP rating configurations, SFP modules, media converters, GPON OLTs and ONUs. Cabinet manufacturing quickly gave Cyberteam® one of the leading positions on the market. Thanks to cooperation with universities such as ZUT and UMCS, products with FiberTechnic® logo are constantly improved to meet the highest standards. Outdoor cabinet with electric switchboard – codesigned with Lublin Technical University – have been named worldwide innovation.

FiberTechnic® mini ADSS Z-XOTKtcdDb 2-12F 0,8 kN SPAN50m 3,7 mm

Application

Multipurpose, self-supporting aerial, outdoor cable for installation on poles or in ducts, with reduced diameter.

Features

- UV resistant
- small diameter
- lightweight
- flexible
- small bending radius
- high performance

Mechanical and usage characteristics

Crush resistance: 1000 [N/10 cm]

Bending radius:

- static: 15 x cable diameter
- dynamic: 20 x cable diameter

Compliance: EN 187101, IEC 60794-1-2-E11

High quality polyethylene HDPE outer jacket.

ITU-T G.652D / G.657A1 **Fujikura** fibers.

FiberTechnic® DAC Z-XOTKtcdD 2-24F 9/125 ITU-T G.652D 4 kN

Application

Cable designed for laying directly in the ground and in protective pipes. Used in FTTX and point-to-point solutions. Ideal for installation in distribution cabinets and customer boxes.

Features

- 4kN crush resistant
- fully dielectric
- orange HDPE outer jacket

Mechanical and usage characteristics

Crush resistance: 4000 [N/10 cm]

FiberTechnic® Micro 12-144F G.652D **Corning** 0,65 kN

Application

Microduct cabling for air-blowing in 14/10 mm and 12/8 mm ducts. Additionally cable can be installed in trays, ducts, pipes and wherever there is no risk of damage by rodents.

Features

- small diameter
- air-blowing application
- fully dielectric
- UV resistance

Mechanical and usage characteristics

Crush resistance: 300 [N/10 cm]

FiberTechnic® 1F G657A2 DROP LSZH 3 mm white – 1000m

Application

Round cable with aramid yarns for indoor use in FTTx systems. Construction is designed to secure optical fiber and allow easy installation. G.657A2 fiber provides small bending radius.

Features

- LSZH jacket
- flexible, small bending radius
- small diameter and lightweight
- aramid yarn strengthening

Mechanical and usage characteristics

Tensile strength: 120 N
 Fire-resistant
 1000 m spools

SPARE CABLE FRAME

Made from aluminium. Frame ensures proper bending radius of cable and safe storage of spare cable. Designed to be installed on square and round telecommunication poles.

Special brackets and holes in frame allow mounting it with steel strips or mounting pins. Fiber optic enclosures can be mounted to the frame with special adapters.

FiberTechnic® FTECH GPON OLT/ONU

FiberTechnic® OLT is main device of OLT GPON broadband used in GPON networks. It is ITU G.984.x G.988 and FSAN compliant.

FiberTechnic® OLT is 1U rack-mounted device with 8 or 16 SFP GPON ports. Each GPON port supports splitting ratio of 1:128, providing downstream bandwidth of 2,5 Gb/s and upstream bandwidth of 1,25 Gb/s.

Single OLT can support up to 2048 GPON terminals. Unit comes with two AC power supplies to provide redundancy in case of failure.

FiberTechnic® OLT GPON FD1608S-B0 8/16xSFP C++
2x10GBIT 4/8x1G UPLINK COMBO +2xAC

ID: 7746 / 7946

- 1U height, RACK 19"
- supports up to 1024/2048 GPON terminals (1:128)
- built – in UPLINK 2x10GE card
- max. transmission distance 20 km
- management interfaces: CLI, WEB, SNMP, TELNET, SSH, OMCI standard
- QoS compatibility
- layer 2 protocol functions: TRUNK, VLAN, IGMP, LACP, flow control technology, ACL

FiberTechnic® Ftech Optical Network Terminals (ONT) allow high data transmission rates for VoIP, Internet, HD video, IPTV.

FiberTechnic® Ftech devices are compatible with OLT's of brands such as Huawei, ZTE, Fiberhome, Alcatel-Lucent, Dasan.

IEEE 802.11 a/b/g/n/ac complaint with transfer rates up to 300 Mbps for 2.4 GHz and 876 Mbps for 5 GHz.

VERTICAL FIBER OPTIC PATCH PANEL

Patch panel fits up to 12 modules and is used to organize fiber optic cables, by using pigtails or splitters. Solution allows to organize up to 144 optic fibers with SC SIMPLEX adapters or up to 288 optic fibers with LC DUPLEX adapters. Smart design allows easy and time-saving way of organizing fiber optic cables used in EPON/ GPON setups.

Fibers are easily organized in slide-out cassettes, which are available separately. The variety of options allow to implement any needed solution. Modular 3U patch panels are dedicated for multitube fiber optic cables, where organization in standard patch panel is very difficult.

To make installation even easier RT-12P tube organizer is used. Thanks to Richco transport tube, fibers are neatly lead out from modules. This way fibers are can be securely installed inside the cabinet.

RACK 19" fiber optic patch panels 12-144F | 1U | 2U | 3U

Front panels are exchangeable and available in many variations for different adapters and splitters. Inside the drawer there is special mounting screw for securing splices trays. 1U patch panel has space for max. 2 splice trays whereas 3U patch panels have space for max. 6 splice trays.

Fiber optic patch panel is used for organizing fiber optic cables with pigtails. It is equipped with a slide-out drawer with telescope rails that provide a full access for easy cable mounting.

1U patch panel without equipment
ID: 3367, 3368, 5584, 5891

SFP, SFP+ MODULES

Designed to work with switches, routers and media converters widely used in telecommunication networks, offices and industrial networks (Industry series with wider range of operating temperature)

All modules come with snap – lock system which prevents accidental disconnection.

Compliant with SFP MSA and SFF-8472 standards.

Modules are compatible with most brands available on the market.

SM, MM, SM/MM MEDIA CONVERTERS

Media converters are used to convert optical signal (100/1000Base-Fx) to copper transmitted one (10/100/1000Base-Tx).

All media converters are IEEE802.3X compliant.

Depending on the model, converters may have SC optical connector and UTP RJ45 connector or empty slot for SFP module.

Auto-detection of transmission mode (half or full duplex for TX port).

Auto-negotiation 10/100/1000 Mbps and automatic MDI/MDIX detection.

FIBER OPTIC ADAPTERS

FiberTechnic® offer includes high quality fiber optic adapters. Each adapter has ceramic ferrule inside.

FiberTechnic® adapters are equipped with steel clips. Key features include low insertion loss and low attenuation what translates to stable and reliable connection.

Adapters are GOLD quality with high repeatability of transmission parameters.

All FiberTechnic® adapters are EN-50173-1, EIA/TIA 568, EN 50377 compliant.

MULTI-OPERATOR FIBER OPTIC CABINET

Design of the cabinet enables the cables to be routed from the telecommunication terminal to the building and distributed directly up to 128 subscribers.

The cabinet has 4 chambers, one distribution and 3 for internet service providers. It allows 3 different ISP to use one cabinet to distribute network to final subscribers. It also protects passive network elements such as adapters, pigtails, splitters and splice trays.

Distribution and ISP sections are separated from each other and secured with different access locks.

DISTRIBUTION CABINET

Cabinet designed for outdoor use for building point-point and FTTx fiber optic networks.

Cabinet consists of two parts – bottom and top. Bottom part is the base which is intended to be buried in the ground. Top part has space where fiber optics are organized by using splice trays, adapters and splitters.

IP44 SINGLE SHELL OUTDOOR CABINETS

Aluminium PA11 outdoor cabinets are powder coated RAL7035. Key features include: good tensile strength, high fatigue resistance and rust resistance in offshore and industrial conditions. The cabinets are almost three times lighter than the same steel S235 cabinets.

Single access

IP56 OUTDOOR CABINETS

IP56 rated FiberTechnic® cabinets come as standard with IP66 Morek cable gland for leading cables and pipes inside the cabinet.

Thanks to innovative, patented filtering cassette design (Patent No. P.422067), FiberTechnic® cabinets are IP56 rated, which makes the inside of the cabinet secured against dust and water.

Key features:

- Ingress protection rating IP56
- Impact protection rating IK10

DOUBLE SHELL THERMO-INSULATED CABINETS

Double shell thermo-insulated cabinets are made using 2mm thick aluminium sheets joined by welds and rivets. Between the sheets there is a 30mm thick insulation.

The door hole has a special profile lip, which allows water to be squeezed out and provides additional sealing.

Insulation of double shell doors is 24mm thick. It seamlessly joins with the cabinet giving proper insulation of the internal chamber. Seals, closing mechanism and hinges are hidden in the external wall.

Features:

- Ingress protection rating IP56
- Impact protection rating IK10

Example of outdoor double shell IP56 cabinet

Outdoor, double shell cabinet
22U STZ 1230/830/830 IP56

ID: 6944

Available options

Example of outdoor double shell IP56 cabinet

Outdoor, double shell, insulated cabinet with three doors 26U STZD 1467/1381/830 IP56

ID: 7633

Standard equipment:

- doors are secured with 3-point bolt and closed by handle with key lock
- special profile lip – allows water to be squeezed out which is especially important during temperatures below 0
- polymer seal
- adjustable RACK rails
- removable floor panel
- IP66 MOREK MC 3/7 for leading cables and pipes inside the cabinet
- gravity ventilation system – in shape of side wall cutouts, protected with patented cat. M-5 filtering cassettes (Patent No. P.422067, other options on demand).

Example of outdoor double door IP56 cabinet

Outdoor, double shell, insulated cabinet, double door 22U STZD 1239/1330/830 IP56

ID: 5721

Available options

22	1239	1330	830	82	aluminium	56
26	1467	1381	830	98	aluminium	56

OUTDOOR CABINETS WITH AIR CONDITIONING

Air conditioning unit CV011002208000 550W-2000W (I35/35)

- input voltage 230V AC 50-60Hz (380V AC as option)
- temperature inside the cabinet set to +35°C
- refrigerant used: R134a (tetrafluoroethene), environmentally friendly. Cooling circuit closed and sealed
- airflow inside the cabinet separated from outside airflow

Removable floor panel – thanks to special seal, floor panel can be removed to mount cabinet to the base. In addition it makes leading cables into the cabinet easier.

TKTS-011 thermostat; bimetallic; automatically starts the AC unit when temperature exceeds given value

- max. input voltage: 250 V AC
- max. current consumption: 10A
- user-defined temperature range: 0°C – 60°C
- operating temperature: -20°C – 80°C
- IP rating: IP20

Doors:

- full, single leaf doors
- left hinges (right hinges optional), opening to 180 degrees
- secured with 3-point bolt system and closed by handle with key lock

Condensation drainage system: dry-decompression element placed in floor panel assures compliance with IP66 rating.

Internal ceiling – insulated panel located under the roof creates air pocket, which in tandem with insulated cabinet protects against water condensation at the top part of the cabinet

RACK rails and frames for rail mounting

Internal chamber is isolated by 20mm thick insulation

FiberTechnic® cabinets are compliant with following norms

- PN-EN 50581:2013
- PN-EN 60825-2:2009
- PN-EN 62208:2011
- PN-EN 60529:2003/A2:2014-07
- PN-EN 62262:2003

OUTDOOR CABINET PLINTHS

Series of underground plinths designed to be a stable base for FiberTechnic® outdoor cabinets.

Each series of FiberTechnic® cabinets has its own unique plinth design that corresponds to type and size. Available as single unit or self-assembly two part set.

Cabinets are secured to the plinths with dedicated bolts.

Fully aluminium single unit design.

Steel, two-part plinth with Magnelis coating. Elements are joined together by six M6 bolts.

RACK INDOOR CABINETS

Hanging, one section cabinets for self-assembly, designed for installing 19" devices. The cabinets are ideal for building networks, installing cables, monitoring or alarm systems, as well as in server rooms

All cabinets have ventilation holes to ensure optimal airflow. It is possible to mount a fan in roof of the cabinets.

Devices which are not 19" can be placed in the cabinets on special shelves.

ANTI-NOISE SHIELDS FOR MikroTik

Cyberteam Sp. z o. o. is one of the largest manufactures of anti-noise shields for Ubiquiti and Mikrotik devices

All of our shields are patented industrial designs

Anti-noise shields minimize interference and block electronic noise from nearby operating devices. Less noise equals better signal quality.

Shields are made of aluminium, what makes them rust free and light. Thanks to CNC technology, the shields are produced with high precision and repeatability.

Each shield is powder coated in the same color as the devices which it dedicated to.

NETPROTECTORS | SURGE PROTECTORS

Ethernet Surge protector effectively protects Ethernet network against surges as a result of inducing high voltage charges. Atmospheric discharges generate charges which damage Ethernet ports and also whole network devices.

Manufacturers do not give guarantee for such damages, that is why the devices must be repaired on the cost of the owners.

Ethernet surge protector collects loads induced in the network and safely transfers them to the grounding, preventing devices from damages.

ADAPTERS

PoE adapters transmit power via Ethernet cables. The adapter can be powered by any 12 to 54V power supply, but also with a buffer power supply. It has a DC power socket and LED diode.

Usage of the PoE adapter gives more space, as less power supplies must be used.

Each port is protected with a securing diode, which isolates it from other ports in case of short circuit.
